The Nuts and Bolts of Machine Learning

NPTEL

Soft skill development

OBJECTIVE

Motivated Master of Computer Applications student with a strong foundation in Python, Django, and Full Stack Web Development. Completed coursework and projects in full-stack application development, database management, and machine learning fundamentals. Eager to leverage analytical abilities to build efficient, user-focused web applications and contribute to impactful software development teams.

INTERNSHIP

Web Development Intern
Edutainer (PAT Technologies Private Limited)-Remote
Mar 2026 – Jul 2026

- Completed intensive hands-on training in full-stack web development, covering Python, PHP, Django, React, HTML, CSS, and JavaScript technologies.
- Gained practical experience in MySQL database management, including schema design, query optimization, and data manipulation.
- Applied learned technologies to develop software projects under mentorship, demonstrating proficiency in Django and frontend development.

Full Stack Web Development Intern
Future Interns (Online)
Oct 2025 – Nov 2025

- Built and deployed a responsive portfolio website using HTML, CSS, and JavaScript, managed version control with Git, and hosted the site on GitHub Pages.
- Developed a mini-market web application using Python Django, implementing product listing, categorization, and browsing features for an online storefront.
- Completed assigned full-stack development tasks on schedule, delivering two functional web projects—a personal portfolio and an e-commerce mini-market—within a one-month internship.

VOLUNTEERING & LEADERSHIP

Workshop Coordinator
Department of MCA, Maharaja Institute of Technology Mysore
16/01/2026 – 17/01/2026

- Led a team of ten volunteers and coordinated with faculty members to ensure smooth execution of workshop sessions.

PROJECTS

FoodMitra-connecting home cooks and food lovers - 2026

- Built a full-stack Django food delivery platform with role-based dashboards (Customer/Cook/Admin), secure authentication with Aadhaar-based cook verification, Razorpay payment integration, and order lifecycle tracking (Pending → Delivered).
- Implemented location-based delivery using OpenStreetMap geocoding and Haversine formula for 5km radius restriction, along with PDF receipts, SMTP email confirmations, and a responsive 15+ page UI using Django templating.

Art and Craft Management System - 2025

- Developed a full-stack Django web application for artists to showcase, manage, and sell their creations.
- Implemented user authentication, admin dashboard, artist profiles, portfolio uploads, and product listing features.
